

No more single-use takeaway packaging!

We are declaring war on disposable packaging for take-away food. Our new ToGo boxes put an end to unnecessary waste production. They are the sustainable alternative to disposable packaging, offering plenty of space for warm and cold dishes to be carried safely and enjoyed.

When you buy our reusable ToGo packaging: No additional fees. No deposit/exchange system.

No more single-use takeaway packaging!

Sustainably produced | Made in Germany.

Our elastoREuse boxes are made of polypropylene (PP) and are manufactured locally at our location in Sulzbach-Rosenberg. They are 100% recyclable and of course BPA-free.

Durable & cost-effective.

Containers made from PP can easily withstand many washes and therefore replace a huge amount of single-use packaging. An enormous saving in terms of costs for you and in terms of waste for the environment.

Individual and customisable.

Want to stand out from the crowd? Our boxes can be fully customised with laser engraving. Of course, this refined finishing touch does not affect the food or the functionality of the box at all.

Environmental footprint.

Compared to the production and recycling conditions for alternative materials, PP performs so much better. Less energy is used to shape it. It weighs less, which saves fuel during transportation, and it is 100% recyclable.

Suitable for the fridge.

You were given a huge portion? With our elastoREuse boxes, that's no problem. You can easily keep food in them in your fridge.

Microwaveable.

Is your food no longer as hot as you would like to be? With our elastoREuse boxes, heating up food in the microwave is no problem.

Suitable for the dishwasher.*

Our boxes are suitable for the dishwasher and can be cleaned there and used again and again.

* Excluding lid 01964 and 01965.

The box has had its day? Give it back!

We recycle together! If our boxes have done their job after all, we take them back free of charge and recycle them completely. The recycled material creates a wonderful new article and the cycle starts all over again.

By using recycled material, we actively conserve resources. In this way, we increase the sustainability of our products and set an example for the responsible use of plastic. This is our contribution to protecting the environment.
